Hwa-nyeon Kim is a Korean economist dedicated to the fields of resources and environmental economics. With a Ph. D. in agricultural economics from Texas A&M University, Dr. Kim has written on an array of resource and environmental issues including the “distributional impact of recreational fees and the environmental Kuznets curve (EKC).” Many of his articles and essays can often be found in Korean newspapers and magazines.

Currently, Dr. Kim is a research fellow at Samsung Economic Research Institute (SERI), Korea’s top private think tank. After joining SERI, his research interests have been mainly focused on forecasts for crude oil prices and contemporary issues in the commodity markets. He is also an advising member for the Korea National Oil Corporation and Korea Agro-Fisheries Trade Corporation.
